Choose the correct answer (a, b, or c).

Basic First Aid Techniques

In a medical emergency, always call for assistance first. The following are basic steps to take in order to help an injury victim before medical help arrives.

Assess the victim's condition. Give him or her plenty of space. Prevent shock by elevating the legs and covering the victim.

Apply pressure to lacerations or other open wounds to stop bleeding. If bleeding has stopped, wounds should be cleaned and wrapped in a bandage. Cool minor burns with running water.

If the victim's pulse or breathing has stopped, CPR or rescue breathing can be performed. Be sure to clear the victim's airway before rescue breathing is carried out.

21. In a medical emergency you should_____.
- A. call the assess
 - B. call for assistance
 - C. call for bleeding
